Quiz Instructions

Please select the best answer for the questions below**.**

Question 1	**2 pts**

Responsive web design is just a form of progressive enhancement**.**

○ True. Progressive enhancement is often used in responsive design, but websites that use it do not have to be responsive—and vice versa.

◉ False. Progressive enhancement is often used in responsive design, but websites that use it do not have to be responsive—and vice versa.

Question 2	**2 pts**

Is it better to use a `<p>` or a `<div>` tag when marking up a paragraph?

◉ You should use the `<p>` tag because it defines paragraphs semantically.

○ You should use the `<p>` tag because you can target it with CSS.

○ You should use the `<div>` tag because it defines paragraphs semantically.

○ You should use the `<section>` tag because it defines the section semantically.

Question 3	**2 pts**

Is the `<header>` element semantic?

○ The `<header>` element is not semantic because it does not describe the content as being the header section of a web page, section, or element.

◉ The `<header>` element is semantic because it describes the content as being the header section of a web page, section, or element.

Question 4	**2 pts**

What are three things that a mobile-friendly site should consider?

○ configuring the viewport, avoiding fixed-width designs, and loading separate html files

○ avoiding fixed-width designs, making links and buttons tappable, and using semantic html

○ configuring the viewport, setting a fixed-width layout, and making links and buttons tappable

◉ configuring the viewport, avoiding fixed-width designs, and making links and buttons tappable

---

Question 5	**2 pts**

What are three things you should always do when building a mobile-friendly site?

○ You should always create a simple navigation and layout, make the page load as quickly as possible, and include all styling and scripting in the html code directly, rather than linking.

◉ You should always create a simple navigation and layout, make the page load as quickly as possible, and test the design on real devices.
